

Open-ended Programming Questions:

Printing Statement

1. Write a program that prints **“Hello, World!”**.
2. Write a program that stores your **name** in a variable and prints “Hello, [name]!”.
3. Write a program that stores an **age** in a variable and prints “You are [age] years old.”

Conditional Statements

4. Write a program that stores a number in a variable and prints whether it is **even or odd**.
5. Write a program that stores two numbers in variables and prints the **larger number**.
6. Write a program that stores a number in a variable and prints whether it is **positive, negative, or zero**.
7. Write a program that stores a grade (0–100) in a variable and prints the **letter grade** (A, B, C, D, or F).

Loop

8. Write a program that prints the numbers **1 to 10** using a loop.
9. Write a program that prints the **multiplication table of 5** (from 1×5 up to 10×5).
10. Write a program that stores a number n in a variable and prints the sum of numbers from 1 to n.
11. Write a program that stores a number n in a variable and prints the factorial of n.
12. Write a program that stores a number in a variable and prints its **multiplication table** (1 to 10).

String

13. Write a program that stores a **word** in a variable and prints its **length**.
14. Write a program that stores a **string** in a variable and prints it in **uppercase**.

Array

15. Write a program that stores the numbers {12, 45, 7, 23, 89} in an array and prints the **largest number**.

Parsons Problem Questions:

Printing Statement

1. Write a program that prints **“Welcome to Java!”**.
2. Write a program that stores the name **“Alice”** in a variable and prints **“Hi, Alice!”**.
3. Write a program that stores the age **25** in a variable and prints **“In five years, you will be 30 years old.”**

Conditional Statements

4. Write a program that stores the number **15** in a variable and prints whether it is even or odd.
5. Write a program that stores the numbers **42** and **18** in variables and prints the **smaller number**.
6. Write a program that stores the number **0** in a variable and prints whether it is positive, negative, or zero.
7. Write a program that stores the grade **72** in a variable and prints the letter grade (A, B, C, D, or F).

Loop

8. Write a program that prints the numbers **10 down to 1** using a loop.
9. Write a program that prints the multiplication table of **3** (from 1×3 up to 10×3).
10. Write a program that stores the number **6** in a variable and prints the sum of numbers from 1 to 6.
11. Write a program that stores the number **4** in a variable and prints the factorial of 4.
12. Write a program that stores the number **7** in a variable and prints its multiplication table (1 to 10).

String

13. Write a program that stores the word **“computer”** in a variable and prints its **first character**.
14. Write a program that stores the string **“Java Programming”** in a variable and prints it in **lowercase**.

Array

15. Write a program that stores the numbers {5, 10, 15, 20, 25} in an array and prints the **smallest number**.
