

Performance Metrics:

Usability Metric for User Experience (UMUX) Lite (for measuring user experience)

Here, the system means the drag and drop questions of moodle or traditional coding of one compiler.

1. This system's capabilities meet my requirements.
2. This system is easy to use.

Scale: 5 point likert scale

- 1 = Strongly Disagree
- 2 = Disagree
- 3 = Neutral
- 4 = Agree
- 5 = Strongly Agree

Cornell Musculoskeletal Discomfort Questionnaires (CMDQ) (for measuring ergonomics)

1. If you experienced ache, pain, discomfort, how uncomfortable was this?

body parts: neck, shoulder, arm, wrist, back

Scale: none, slightly, moderately, very uncomfortable

body parts: neck, shoulder, arm, wrist, back

CS Cognitive Load Component Survey – Intrinsic Load (IL)

Here the activity means drag and drop questions or one compiler.

1. The topics covered in the activity were very complex.
2. The activity covered program code that I perceived as very complex.
3. The activity covered concepts and definitions that I perceived as very complex

Scale: 11 point scale

0 – 10 : not at all the case -> completely the case
